## Thinking and Stopplng Distances

You need to know the thinking and stopping distances in the Highway Code for the theory test.

Personally, trying to remember all numbers was a bit of a challenge so I have worked out a way to calculate all the figures. At the end of the day, some people prefer to remember the figures and others are good with maths.

Let's say you're driving down a road and a child walks out from behind a car,
Thinking distance = how far you will travel before you are able to react and hit the brake pedal
Stopping distance = how far you will travel before you subsequently stop
Overall distance $=$ thinking distance plus stopping distance combined.

Remember that the distances shown are a general guide from years ago. The real world distances will depend on your attention (thinking distance), the road surface, the weather conditions and the condition of your vehicle at the time. In fact it has recently been shown that our reaction time is considerably slower these days due to the number of distractions we now face (phones, people, more cars on the road etc.) but the cars are better so tend to stop sooner.

Just as a pointer, the multiple choice questions only ever offer you valid figures, so if they're asking for figures relating to 20 mph then it's always the smallest number; if they ask about 70 mph then it's the largest number. In theory, this means that you would only need to learn figures for $30,40,50$ and 60 mph ! Cool huh?

Here are the figures (metres are fine as the questions always show metres and feet).

| Speed | Thinking Distance | Braking Distance | Overall Distance |
| :--- | :--- | :--- | :--- |
| $20 \mathrm{mph}(32 \mathrm{kph})$ | 6 m | 6 m | 12 m |
| $30 \mathrm{mph}(48 \mathrm{kph})$ | 9 m | 14 m | 23 m |
| $40 \mathrm{mph}(64 \mathrm{kph})$ | 12 m | 24 m | 36 m |
| $50 \mathrm{mph}(80 \mathrm{kph})$ | 15 m | 38 m | 53 m |
| $60 \mathrm{mph}(96 \mathrm{kph})$ | 18 m | 55 m | 73 m |
| $70 \mathrm{mph}(112 \mathrm{kph})$ | 21 m | 75 m | 96 m |

The Calculation

| Finger | Speed | Thinking Distance | Braking Distance | Overall Distance |
| :--- | :--- | :--- | :--- | :--- |
|  |  | Starting figure | Column 1 | Column 2 |
| 1 | $20 \mathrm{mph}(32 \mathrm{kph})$ | 6 m | 6 m | 12 m |
| 2 | $30 \mathrm{mph}(48 \mathrm{kph})$ | 9 m | 14 m | 23 m |
| 3 | $40 \mathrm{mph}(64 \mathrm{kph})$ | 12 m | 24 m | 36 m |
| 4 | $50 \mathrm{mph}(80 \mathrm{kph})$ | 15 m | 38 m | 53 m |
| 5 | $60 \mathrm{mph}(96 \mathrm{kph})$ | 18 m | 55 m | 73 m |
| 6 | $70 \mathrm{mph}(112 \mathrm{kph})$ | 21 m | 75 m | 96 m |

I remember:
That the speed starts at 20 mph and stops at 70 mph in 10 mph increments
There's a multiplier that increases by 0.5 each time
The magic number I need is 3 to give me my starting figure.

## How to do It

I need a starting figure (AKA Thinking Distance) and this is obtained thus:
Take the first digit of the speed i.e. 4 for 40 mph .
Multiply it by the magic number of 3 to give you your starting figure of 12 m .

After this I need to calculate the figures for the remaining 2 columns.

At 20mph, column 1 (braking distance) starts at a multiplier of 1 and column 2 (overall distance) starts at a multiplier of 2.
Each increase in mph increases the multiplier by 0.5.

I need to calculate figures for 40 mph so I whip out my fingers and start counting on them:
$20=$ Finger 1
$30=$ Finger 2
$40=$ Finger 3

For column 1 (braking distance)
Finger $1=1 \times$ multiplier
Finger $2=1.5 \times$ multiplier
Finger $3=2 \times$ multiplier
My starting figure was 12 m , my multiplier is 2 therefore the braking distance is 24 m

For column 2 (overall distance)
Finger $1=2 \times$ multiplier
Finger $2=2.5 \times$ multiplier
Finger 3 = $3 \times$ multiplier
My starting figure was 12 m , my multiplier is 3 therefore the overall distance is 36 m

If you get a half number then round it up.

On the theory test you are offered multiple choice therefore always go for the number that's nearest to your calculation!!

Thinking distance

| Speed | Multiplier | Magic number | Thinking Distance |
| :--- | :--- | :--- | :--- |
| 20 | 2 | 3 | 6 |
| 30 | 3 | 3 | 9 |
| 40 | 4 | 3 | 12 |
| 50 | 5 | 3 | 15 |
| 60 | 6 | 3 | 18 |
| 70 | 7 | 3 | 21 |

Braking distance (column 1 therefore a starting multiplier of 1)

| Finger | Speed | Thinking | Multiplier | Braking | Rounded | Actual |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 20 | 6 | 1 | 6 | 6 | 6 |
| 2 | 30 | 9 | 1.5 | 13.5 | 14 | 14 |
| 3 | 40 | 12 | 2 | 24 | 24 | 24 |
| 4 | 50 | 15 | 2.5 | 37.5 | 38 | 38 |
| 5 | 60 | 18 | 3 | 54 | 54 | 55 |
| 6 | 70 | 21 | 3.5 | 73.5 | 74 | 75 |

Overall distance (column 2 therefore a starting multiplier of 2)

| Finger | Speed | Thinking | Multiplier | Overall | Rounded | Actual |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 20 | 6 | 2 | 12 | 12 | 12 |
| 2 | 30 | 9 | 2.5 | 22.5 | 23 | 23 |
| 3 | 40 | 12 | 3 | 36 | 36 | 36 |
| 4 | 50 | 15 | 3.5 | 52.5 | 53 | 53 |
| 5 | 60 | 18 | 4 | 72 | 72 | 73 |
| 6 | 70 | 21 | 4.5 | 94.5 | 95 | 96 |
